# General Product Information

## Product Test Conditions

LUXEON Altilon Intense Gen2 1x2 is binned using a <20 ms monopulse (MP) at 1500 mA drive current. The case temperature  $T_c$  is set to 85 °C at the beginning of the pulse. Unless otherwise noted, the same test conditions apply to all data in this document.

## Designing with LUXEON Altilon Intense Gen2 1x2

Flux bins supportable for car programs depend on product color and program start-of-production and end-of-production dates. Flux roadmaps by year and product color are maintained and available from the sales representative. Please contact a local sales representative to request the flux bin range with best supportability for program timing.

## Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheet. For this reason, Lumileds bins LED components for luminous flux, color and forward voltage.

LUXEON Altilon Intense Gen2 1x2 LEDs are labeled using a 4-digit alphanumeric CAT code following the format below:

**A B C D**

Where:

- A** – designates luminous flux bin (example: Q = 370 to 380 lumens) per die
- B C** – designates color bin (example: H2, HC, H3, H5)
- D** – designates forward voltage bin (example: B = 6.4 to 7.0 V)

Therefore, a LUXEON Altilon Intense Gen2 1x2 with a lumen range of 370 to 380 lm, color bin of HC, and a forward voltage range of 6.4 to 7.0 V has the following CAT code:

**Q H C B**

## Luminous Flux Bins

Table 6 lists the standard luminous flux bins for LUXEON Altilon Intense Gen2 1x2 emitters. To obtain the flux of the product this number needs to be multiplied with the chip count. Product availability in a particular bin varies by color and platform start-of-production date. Contact your local sales representative for best supportability of programs.
